history will remember that period as the far west in technology. Terror from the big dark microsoft.

What i love the most about ALL THIS is that a simple baby toy that can be dangerous or or a simple leaking rubber around a window on a car mean imediate recall at the manufacturer cost but an operating system that don't work (they are always wost and worst) can be sell with no support!! (don't tell me patch exist because i don't personaly fix my recalled car).

Tanx a lot USA to tell all young in this country that you must not fight for your right. Resistance is futile. Don't inovate because the bigger lawyer win.

I hope the DoJ will be included in future law suit because you are part of the problem. BTW do you have a purpose.

And remember, grow a spine because you look like a slug around the world!
